

UNISOLE AI CAMPUS PROGRAM

GROUP 4 — BA, HUMANITIES & OTHER DISCIPLINES

Pathway: AI-Enabled Professional Program

Target students: BA • Humanities • Social Sciences • and other non-technical disciplines

Overview

This program is deliberately not positioned as a lighter or "easy" track. It is framed as a full **AI-Enabled Professional Program** — recognizing that BA, humanities, and other non-technical students bring strong research, writing, and communication skills that AI tools amplify rather than replace. Instead of teaching coding, this pathway teaches students to use AI as a professional multiplier across research, communication, and career-building, and to package that skill into evidence a recruiter can actually evaluate.

Why this pathway matters: The fastest-growing AI skill gap isn't technical — it's professional AI fluency. Humanities graduates who can research, write, and think critically already have the hardest skills to teach; this program adds the AI layer that makes those skills dramatically more productive and visible to employers.

Module 1 — AI Literacy

Before students use AI tools, they need an honest, non-hype understanding of what AI actually is and where it fails — this protects them from both underusing and over-trusting these tools.

Topics covered:

- What AI is — a clear, jargon-free foundation
- Generative AI and LLMs — how today's most visible AI tools actually work
- AI capabilities — what these tools are genuinely good at
- AI limitations — where AI gets things wrong, and why that matters
- Responsible AI — using AI ethically and appropriately

Skills gained: The critical judgment to use AI tools effectively without over-trusting or misusing them — increasingly a baseline professional expectation.

Module 2 — Prompt Engineering

The single most transferable AI skill for a non-technical professional: knowing how to instruct an AI system precisely enough to get genuinely useful output.

Topics covered:

- Prompt structure — how a well-formed prompt is built

- Context, Role, Constraints — the elements that shape an AI's output
- Examples and Few-shot prompting — showing an AI exactly what "good" looks like
- Iterative prompting — refining a prompt until the output is genuinely useful
- Prompt evaluation — judging whether AI output is actually good enough to use

Skills gained: Reliable, repeatable skill at getting high-quality output from AI tools — the difference between "AI didn't help" and "AI tripled my output quality."

Module 3 — AI for Research

Applies AI directly to the core academic skill humanities students already have — research — teaching them to use AI to work faster without sacrificing rigor or accuracy.

Topics covered:

- Research questions — framing a research problem clearly
- Information discovery and Literature exploration — finding relevant sources faster
- Summarization and Comparison — synthesizing large amounts of material quickly
- Data interpretation — making sense of what's been found
- Citation awareness and Fact verification — using AI without compromising academic or professional integrity

Skills gained: Dramatically faster, still-rigorous research skills — directly applicable to further study, journalism, policy, law, and any research-heavy career path.

Module 4 — AI for Productivity

Everyday professional tasks — writing, organizing, communicating — accelerated using AI as a working assistant rather than a novelty.

Topics covered:

- Writing and Documentation — drafting faster without losing quality
- Presentation — building professional materials efficiently
- Research assistance and Communication
- Workflow automation — removing repetitive manual work from daily tasks

Skills gained: Practical, everyday AI fluency that makes a student measurably more productive in almost any office or knowledge-work role.

Module 5 — AI for Content & Communication

Builds on students' natural communication strengths, teaching them to plan and produce professional content with AI support.

Topics covered:

- Content strategy — planning what to communicate and why
- Presentation development — building compelling, well-structured materials
- Visual ideation — using AI to support (not replace) visual thinking

- Professional communication
- AI-assisted content workflows — end-to-end content production using AI tools

Skills gained: The ability to produce professional-grade content — articles, reports, presentations, campaigns — significantly faster and more consistently.

Module 6 — AI & Career

Turns everything learned so far toward the student's own job search and professional identity.

Topics covered:

- Resume and LinkedIn — building a strong professional profile, AI-assisted
- Interview preparation — using AI to practice and refine responses
- Professional communication
- Job research — using AI to research companies and roles efficiently
- Personal branding — presenting a coherent, compelling professional identity

Skills gained: A polished, professional job-search toolkit built using the exact AI skills taught throughout the program.

Module 7 — Entrepreneurship

The same discovery-to-pitch arc taught across the program, giving BA/humanities students the option to package their skills into an idea or venture rather than only a job application.

Topics covered:

- Problem discovery and Idea generation
- Market research
- AI-enabled business — where AI creates an opportunity a humanities-trained founder could build
- MVP — testing an idea quickly
- Pitching — presenting the idea clearly and persuasively

Skills gained: The option to explore founding or contributing to a venture, using the same structured discovery process taught to every other group in the program.

Capstone Project

Students create an **AI-Enabled Professional Portfolio** — a single body of work that proves, end to end, that they can research, communicate, and use AI as a professional tool. It includes:

- A research/analysis project demonstrating AI-assisted research skills
- A documented AI workflow showing how AI was used throughout
- A professional presentation of the work
- A polished resume
- A concrete career plan
- An entrepreneurship/innovation idea, validated using the discovery-to-pitch framework

Tools & technologies used across this pathway: Generative AI / LLM tools, prompt engineering techniques, presentation and documentation tools, AI-assisted research and writing workflows.

Career relevance: Research Associate, Content Strategist, Communications and PR roles, Policy and Public Sector roles, HR and People roles, Marketing, Journalism, and any knowledge-work role where AI-augmented research and communication is a differentiator.

Student outputs: AI-Enabled Professional Portfolio, career plan, resume, and a defended presentation of the full body of work.

Industry-Readiness Layer *(applies alongside this pathway)*

Professional Digital Profile: Professional email, LinkedIn, Resume, Portfolio, Project documentation, Professional communication.

Evidence: Portfolio, Dashboard/report, Research documentation, Project presentation.

Interview Preparation: Resume walkthrough, Tell-me-about-yourself, Project explanation, Behavioural questions, Technical/domain questions, Mock interview, Feedback.

Industry Interaction: Weekly/periodic expert sessions, Career sessions, Industry case studies, How companies recruit, How to approach professionals, Networking etiquette.

Project Defence: Every student must be able to answer — What problem did you solve? Why did you choose this approach? What did you build? What did you learn? What are the limitations? What would you improve?

Final Capstone Framework

1. **Problem** — Identify a real-world problem
2. **Research** — Understand the domain and existing solutions
3. **Data/Information** — Collect and organize relevant information
4. **Build** — Create the appropriate research/professional solution
5. **Validate** — Test the solution and interpret results
6. **Document** — Report, Repository/portfolio, Documentation, Presentation
7. **Defend** — Present the project before an evaluator/mentor

What This Student Should Have at the End

AI Portfolio + Research/Professional Project + AI Workflow + Resume + Presentation

Training and assessment are program components. Internship, advanced projects, hackathons, research engagement and other opportunities are performance/availability-based and subject to applicable selection procedures.
